#RIES23

INTRODUCTION

Forum RIES is the international reference forum at a national and international level to address the challenges and opportunities within the care ecosystem. Led by the Galician Health Cluster, CSG, it has been created as a meeting forum between the main agents of the public and private health and care sectors at a European level in collaboration with our strategic partners of the #CSG_Community.

In this eighth edition, that will be held in the city of Vigo, the theme of the VIII Forum RIES 2023 (#RIES23) "Innovative care ecosystems" encompasses one of our main purposes: to be a professional platform for public-private collaboration between the different agents of the sector that promote innovative collaborative projects within our ecosystem of innovation in health and care.

#RIES23 focuses on highlighting the essential role played by health and care innovation ecosystems and their key opinion leaders, a core value of our #CSG_Community. In this eighth edition of the RIES Forum, we aspire to give voice, listen and get to know all the members of innovative ecosystems while deepening our knowledge around four main topics of interest: Longevity, Biotech, OneHealth and Artificial Intelligence.

GALICIAN HEALTH CLUSTER

The CSG is made up of patient associations, entrepreneurs, startups, SMEs, multinationals, universities, technology centers, biomedical foundations, non-profit associations, professional associations and collaborators from cross-cutting sectors of the health and care sectors.

In our more than 10 years of history, we have managed to carry out large projects and expand our ecosystem. Today we incorporate a hundred entities, including users, industry and regulators, who are committed to Galicia as an advocate for innovation in health, supporting and promoting the competitiveness of this sector.

We have managed to position ourselves as a professional collaboration platform for global projects and alliances as a catalyst for the needs and concerns of their actions. Therefore, our common objective focuses on supporting innovation for the co-creation of solutions that improve people's well-being. Our purpose, to make Galicia the best place to age healthily.

WHY BE PART OF #RIES23?

#RIES23

The **VIII Forum RIES 2023: Innovative care ecosystems** follows the line of an experience congress and meeting point where the challenge of innovative health solutions providing a response to people in their different contexts is openly exposed with the aim of maintaining their well-being and autonomy.

After the success of past editions, it is clear to us that the great reception of #RIES involves positioning itself as a unique meeting and discussion event thanks to a careful selection of content and participants. In the end, this annual event brings together experts, innovative companies and organizations committed to the positive transformation of society.

The interactive dynamics will be reiterated to reflect on the most important and current issues of the ecosystem, but with the particularity that the number and space were expanded so that you have the option to choose that information, knowledge and collaborations that have an impact on your benefit. The ultimate goal of the event is to generate synergies to promote R&D&I projects that offer technological solutions based on people's real needs.

In summary, being part of RIES is a unique opportunity to learn, connect and contribute to the positive development of innovative care ecosystems.

Rocío
Mosquera Álvarez

For the eighth consecutive year, the VIII RIES Forum 2023 is confirmed as the flagship event of the Cluster Saúde de Galicia, CSG, but it has also demonstrated its relevance as a driver of innovation in the health sector. The successful trajectory of previous editions has consolidated this forum as an enriching experience that seeks to strengthen ties within and outside the #CSG:Community

The RIES Forum stands as an annual and collaborative meeting space where we bring together all the actors and entities interested in the joint search for solutions that promote the well-being of people. Specifically, in this edition we will touch on the different innovative care ecosystems with the aim of delving into four clear themes: Longevity, Biotech, OneHealth and Artificial Intelligence.

This year we are waiting for you again to create an open and constructive dialogue that allows us to identify the challenges and opportunities that arise in these new advances-transformation processes.

See you at #RIES23!

Beatriz Díaz Lorenzo

Dear collaborators,

Having reached this eighth edition of the Forum RIES 2023 after especially complex years, we believe that this event has reached heights, but it is necessary to maintain our efforts to promote the health sector.

Today no one doubts that the prosperity and future of society depends largely on our greatest good: health. A health whose strength and well-being must be supported by scientific and technological advances that address current and future challenges.

In this eighth edition we focus on two realities, the Longevity of the population and global health from a OneHealth approach, and two tools of enormous impact, Biotechnology and Artificial Intelligence.

- Longevity: the aging of the population is a growing reality, and therefore we must face new challenges linked to it that require a reformulation of the approach in terms of greater humanization, flexibility and efficiency.
- OneHealth: a health and scientific perspective that has fully incorporated this concept that tells us about a single health, just as we have a single planet. Today, after a 21st century with highly relevant epidemic outbreaks, no one doubts the interrelation between aspects such as the environment, climate change, globalization, and human and animal health.
- Biotechnology: COVID clearly showed us the way: research and prevention of diseases through biotechnology and vaccines. The best investment in Health is prevention and among the most powerful prevention systems are vaccines, whose cost/benefit balance is unmatched by any other.
- Finally, Artificial Intelligence (AI) is transforming the way healthcare is delivered. At the same time, new challenges and opportunities appear that must be addressed from a broad perspective and with one main objective: promoting the well-being and security of people and the public interest.

Let's move towards this new way of understanding health, in a global way. This is our commitment to this edition VIII Forum RIES 2023 , focused on Innovative Care Ecosystems.

I am convinced that it will be of great interest with the contribution of all those involved.

ORGANIZING COMMITTEE #RIES23

PRESIDENCY	ORGANIZATION
Beatriz Díaz Lorenzo - Director of Communications and Global Brand	ZENDAL
Committee	
Miguel Álvarez Iglesias - Center Manager	atlanTTic Research Center (Universidade de Vigo)
Luis Barros Ríos - CEO	ATENDO
Beatriz Gil De Araújo de Simón - Director	Fundación Biomédica Galicia Sur

KEYNOTE SPEAKERS

Vania de la Fuente Núñez: Independent Consultant

Title: Healthy aging: the key to unlocking the opportunities of our increasing longevity

Summary: In this keynote, we will delve deeper into the vital role of healthy aging as a gateway to taking advantage of the limitless opportunities presented by our long life expectancy. You will discover what changes and innovations are needed to ensure that we can continue to be and do what we value in old age, including the transformation that is needed in the way we work, live and contribute to society. Don't miss this Keynote that will allow you to unlock the full potential of our greater longevity and turn it into a transformative force for individuals, communities and society as a whole.

Title: Lessons learned from healthcare transformation and the role of innovation clusters.

Summary: This speech provides an overview of research and innovation policies over the last 25 years from a European and international perspective with a focus on the role clusters (medicine, life sciences and health including technology and digital). Policy objectives, instruments and context will be described with good practices and lessons learned for education, research, innovation and cluster development. Questions as 'what can we learn from failures and successes?', 'Should we continue this health innovation cluster approach considering the current social-economic challenges?' and 'what are the implications from lessons learned for emerging clusters in Southern-Eastern Europe?'. This presentation will be zooming-out to a policy level as well as zooming-in on practical examples and personal experiences across the globe (both public and private) with the latest trends and current state of affairs regarding innovation and healthcare transformation.

ROUNDTABLES

Challenges of Health Systems in the face of A.I.

Currently, there are many challenges that healthcare systems face. Artificial Intelligence seems to be able to help solve some of them, but at the same time it represents in itself one of the greatest challenges that Healthcare has faced: from ethical to technological challenges, from its use as support to clinical decisions such as the need to trust complex algorithms... This table aims to approach the approach that health systems must take to take advantage of this technological disruption and the possible tolls it may entail.

ROUNDTABLES

Challenges in the face of future health emergencies. Prevention and vaccines

Round table with leading experts in the health and vaccinology ecosystem to discuss global health challenges.

Health has no geographical borders, which is why we must work for better preparation for possible health emergencies from our area of action, Europe. The table will offer an exclusive opportunity to meet national and international experts who work in the health ecosystem and vaccines, from the most technical, university approach to the industrial and public information part. It will address aspects related to the need for better preparation and response to health demands or emergencies and future pandemics to address possible future crises or global health emergencies from a ONE Health perspective and from a European framework.

ROUNDTABLES

The use of technologies in health: challenges, benchmark and limitations

The use of technologies in the health field is experiencing significant growth in recent decades, offering various opportunities, such as improvements in diagnosis, telemedicine, electronic health records or personalized medicine, among others. This issue also presents various challenges, such as the digital divide, the regulatory framework, privacy and security in the storage or transmission of data, with their respective limitations in relation to the costs of investing in health technologies, the resistance that exists to change or algorithmic errors. The benchmarking of successful cases and the consideration of limitations are essential to make the most of the potential of these technologies in health care but, without forgetting that technology is sometimes not a challenge in itself, but the challenge comes in how this technology adapts to the context and how it evolves hand in hand with the people who make up the ecosystem.

Agora Transforming Health and Care Attention: The Role of European Data Spaces

The healthcare sector is highly regulated and healthcare data is considered worthy of special protection. Therefore, it is expected in this agora to evaluate the usefulness of the European model of the European Health Data Space, the main problems associated with its implementation and the advantages that this model can provide for the improvement of socio-health care, the personalization of treatment plans, medical research and/or drug development.

The decarbonization process in the sector: Carbon Neutral healthcare centers

The theme of the agora is related to the recent Circular Economy Strategy that Sergas has launched, and which includes plans to reduce CO2 and improve Energy Efficiency, as well as the adaptation of health centers to avoid energy losses.

At the Ágora Table we would like to discuss the different ways of achieving these objectives through direct investment models, financed with public-private collaboration, or through Innovative Public Procurement mechanisms.

Agora Social Technology for an Active Longevity

As a society we have to get involved and decide what type of longevity we want. The goal is not only to live longer, but to live better and for each person to be able to choose how to face longevity based on their preferences. As a society we have to be able to respond to the great challenges that this new paradigm represents.

Agora Attention to chronicity in the 21st century

One of the greatest challenges facing the health sector is addressing chronic pathologies and providing adequate care to these patients from the system. We will analyze from different points of view the evolution of chronic care and how the incorporation of technology and the use of artificial intelligence has helped the monitoring of chronic patients without having to travel to the hospital.

Agora Living Labs in Care. How to homogenize the validation of digital solutions in care through Living Labs at a European level

A Living Lab is an open innovation ecosystem in real life environments. A current concept where there is a very wide field of resources in which there is still a long way to go to learn and progress within the care ecosystem. This Agora aims to facilitate collaboration and exchange of knowledge between the different parts of the ecosystem to promote the homogenization of the validation of digital solutions in care. To do this, we must address different issues where we must advance and grow. Among them we have: European standardization, the search for funding and cooperation, ethics and privacy, co-creation with citizens, future challenges and opportunities, the collaboration network and the best practices that already exist. In this Agora there will also be an open debate on how Living Labs can add value to the business and entrepreneurial world, to generate synergies with Start-ups, accelerators, SMEs and large technology companies.

Project Sanidade Mediaverso: Technology to promote a healthy lifestyle

Speaker: Silvia Suárez Luque, Deputy General Director of Programs to Promote Healthy Lifestyles.

Sanidade Mediaverso is a multi-technological content management platform for the promotion of healthy lifestyles, which has been developed by the BiGXoia joint venture, contracted by the General Directorate of Public Health and financed within the framework of the REACT-EU axis of the FEDER Galicia 2014-2020 operational program.

This platform contains digital resources that guide Galician citizens on how to include healthy lifestyle habits in their daily routines. Mobile applications, virtual reality, augmented reality, training pills, healthy menus and other content related to a balanced diet, the promotion of physical activity, healthy sleep and emotional well-being will help achieve the objectives set in the Zero Obesity Plan in Galicia.

Project Promoting the decarbonization of the health sector in Spain

Speaker: Ricardo Boedo Facal, Director Corporate & Government Affairs General Medicines.

Climate change is the main threat to human health according to WHO. Emissions from the health sector account for 4.5% of total emissions, a sector involved in improving people's quality of life has to take action to reduce its climate footprint. In Spain, different actors in the health sector are taking actions to reduce the carbon footprint, being an example for the health ecosystem and other sectors. At GSK as a pharmaceutical company, we propose actions that allow us to reduce the carbon footprint, which allow us to continue improving people's quality of life and reducing the impact on global warming. We will present an example that would allow us to reduce up to 400,000 tons of CO₂eq per year, the equivalent of the emissions of 220,000 vehicles.

(Ocean Kube Environment).

Project Ecology, hygiene and health

Speaker: José Antonio Pena Parga, Founder and Commercial Manager (Ocean Kube Environment).

How a new paradigm in solid waste collection can improve the sustainability of the system and can also achieve greater health safety. De-plasticisation, Water Footprint Mitigation, Water Footprint Reduction, Universal Accessibility: these are the guidelines that define this paradigm shift and lead to improved hygiene and health security.

Luis Barros Ríos, CEO
(Atendo).

Project Atendo Senior Living

Speaker: Luis Barros Ríos, CEO (Atendo).

Speaker: Ángel Rodríguez Cerdeira, Digital Transformation Manager (Longevita).

Atendo Senior Living: Strategic Alliances of a Residential Center of Innovation and Accommodation with Care

An alternative accommodation for older people that begins in Galicia the Re-Evolution of new types of senior accommodation that are reaching the sector in Spain and that aspires to become a natural ecosystem from which to democratize access to innovation and knowledge in this sector.

Ángel Rodríguez Cerdeira
Digital Transformation
Manager (Longevita)

An intergenerational center of 25m2 apartments with everything necessary so that the people who live there continue to find many reasons to “live with meaning.” And a response to a diverse and heterogeneous generation of older people who demand other models for when it is no longer possible to continue living at home, which is where the majority have chosen to live and grow old.

Albert Creixell Pons
Head of Alexa Enterprise Spain
& UK (Amazon).

Alexa even closer to the elderly in Spain: Alexa for Senior Living

Speaker: Albert Creixell Pons, Head of Alexa Enterprise Spain & UK (Amazon).

Alexa Smart Properties for Senior Living is now available in Spain. This service, which simplifies the use and management of devices with integrated Alexa, is designed to offer value-added and personalized experiences to improve the daily lives of older people and, operationally speaking, health-care personnel in nursing homes. Amazon will present the use cases installed in the launch partners in Spain and will explain the experiences with older people and the voice assistant.

IKEA: #CHALLENGE25

Speaker: Andrea López Sánchez, HF&RD, Marketing and Sustainability Manager

Andrea López Sánchez
Marketing and
Sustainability Manager.

Redesigning the cities of the future for the longest-lived society in history, in which there is awareness of the need to create environments and services that promote and facilitate an active and healthy life, is one of the main challenges that require cooperation to offer different and sustainable solutions. #CHALLENGE25 is the joining of forces in favor of an objective of common interest: Giving value to our home as a refuge for emotional well-being and as a part of us and our life story.

NOVEMBER 8TH SESSION - GALA DINNER

This first day includes the official opening of the VIII Forum RIES 2023 in a unique space for networking and business generation in a relaxed atmosphere with reduced capacity. Its objective is to highlight the speakers, sponsors, collaborators and winners of the VIII Forum RIES 2023.

HOUR (CET)

WHAT ARE YOU GOING TO DO

TOMORROW

(with registration closed: Platinum, Diamond Sponsors, authorities, speakers)

8:00 - 10:00

SEN Consortium Meeting

SENIOR ECO-NECT

Senior Eco-Nect project aims at preparing a joint action plan to support the emergence and the development of European ECOsystems dedicated to silver and ageing ECOmomy as well as ensuring the inclusivity and interconNECTivity between all the key innovation stakeholders of the sector and cross-sectors. The plan will be prepared in june 2024 and if selected, it's implementation will start.

CSG participates in the mapping of the stakeholders and the solutions to be included in the action plan, the organization of thematic workshops and the dissemination of the results. In addition, #RIES23 has been chosen to hold the midterm results event of the project.

#RIES23

TWINNING PARTNERS OF #RIES23

This year we want to start with the #RIES_Twinning as recognition of the collaborative relationships extended over time between the Galician Health Cluster, CSG and an outstanding international collaborator nation.

The CSG firmly believes in collaborations sustained over time and the exchange of good practices and the execution of joint activities. For this reason, starting with #RIES23, we are giving the deserved visibility to the bilateral relations that have been carried out since 2016 and the results achieved to date.

The twinning is a confirmation of the willingness of both parties to collaborate in joint and concrete actions with the aim of promoting mutual knowledge, carrying out innovative health and care projects and to generate business and new growth opportunities.

The VIII Forum RIES 2023 will showcase the trajectory with three of our main collaborators: Scotland and Slovenia.

There will be a presentation of our collaboration during the #RIES23 Gala Dinner and they will be present in all VIP and strategic meetings with our authorities and main collaborators. It is expected that we will receive public and private representatives of their ecosystem that will participate in the full #RIES23 program.
